Chapter 2: Understanding the Rating Ground Freight API

Business Rules

General

- UPS expects schema elements/tags as defined in the XPath and presented in the schema structure without spelling or structural deviations. Elements/tags that are not defined in the schema or do not conform to the schema structure will be ignored by UPS.
- Only users that plan to ship packages manifested, tendered, and delivered by UPS can use the API.
- Any customers/developers abusing or data mining the API will have their access revoked.
- To access API documentation the user must have or create a UPS profile.
- To access testing and production sites the user must have an Access Key. To get an Access Key you must have a UPS profile and an associated shipping account. For additional information, refer to the [UPS Developer Kit User Guide](#).

Rating Ground Freight Rules

- The Rating Ground Freight API cannot be used to access rates or data from proprietary rate basing systems or licensed products that are not the property of UPS. The Rating Ground Freight API may not be used by brokers or resellers of transportation services. The Shipping and Pickup APIs are the products of UPS and are available to all customers.
- Must be registered with a user ID and password for both MYUPS and MYLTL in order to see Negotiated Rates. For additional information, refer to the *LTL Instructions for Negotiated Rates* guide in the Developer Kit.
 - All shipping and billing locations must be included in the Ground Freight registration.
- Requests for utilizing the Rating Ground Freight API with data from proprietary rate basing systems or licensed products that are not the property of UPS can only be considered after approval from the owning authority. Upon application for access to the Rating Ground Freight API, UPS Freight will request approval from the owning authority prior to completing the application request.
- The Rating Ground Freight API may only be used by brokers or resellers of transportation services with a current and active UPGF Master Transportation Agreement. The Shipping and Pickup APIs are the products of UPS and are available to all customers.

Negotiated Rates

- To view negotiated rates for Ground Freight rates please contact your Account Executive.
- Must be registered with a user ID and password for both MYUPS and MYLTL in order to see Negotiated Rates.

UPS Freight Density Rates

UPS Freight Density Rates provide a new rating method based on dimensional weight for the UPS Freight Less Than Truckload (LTL) and UPS Ground with Freight Pricing (GFP) customers who ship using the Shipping API – Ground.

Chapter 3: Customer Integration Environment (CIE)

The Customer Integration Environment allows customers to test their application prior to launch. This environment is intended for integration testing of customer applications with the UPS servers.

Once your application has been thoroughly tested, you should redirect the application to the UPS Production Environment.

No stress testing should ever be performed by customers against any UPS systems.

To access testing and production sites the user must have an Access Key. You can request an Access Key after establishing a UPS profile and associating your shipping account.

Test your Rate and Service selections using valid and invalid data elements including postal codes, weights, and package types. This will ensure that your application has the ability to process success and error responses correctly.

System Availability

The Customer Integration Environment is available 24 hours a day, 7 days a week. Note, the system is occasionally down for server maintenance.

LTL Freight Country or Territory Origins

LTL Freight country or territory origins include US, CA & MX. The US territory means the contiguous 48 states of the US and Washington DC. While we service Hawaii, Alaska, Guam, Puerto Rico and the US Virgin Islands, those rates can only be obtained by calling UPS Freight Customer Service at (800) 333-7400.

Using Negotiated Rates in CIE

The negotiated rates returned do not reflect the contractual rate and may vary.

Also, in the Customer Integration Environment, the shipper eligibility for negotiated rates is not fully verified.

Typically the Negotiated Rates in CIE are as follows:

- i. Basic Pricing is 67% off the published rate
- ii. Density Based Pricing is 23% off the published rate
- iii. Exception Pricing is 49% off the published rate
- iv. Regional Tier Pricing is 36% off the published rate

Integration Testing

All API URLs are case sensitive.

For integration testing, direct your Rating Ground Freight Web Service to:

<https://wwwcie.ups.com/webservices/FreightRate>

Production

All API URLs are case sensitive.

Once testing is complete, direct your Rating Ground Freight Web Service API to the production URL:

<https://onlinetools.ups.com/webservices/FreightRate>

Server Availability Check

All of the UPS services work using HTTPS POST. If the server is available, it will reply with the service name, remote user, server port, server name, and servlet path.

To see this in action, type the following URL in your web browser: <https://wwwcie.ups.com/webservices/FreightRate>

Server Name:	FreightRateWS
Remote User:	Null
Server Port:	443
Server Name:	wwwcie.ups.com
Servlet Path:	/FreightRate

Ground Freight Test Cases

Chapter 6: Rating Ground Freight API FAQs

Category	Question	Answer
3rd Party/ Freight Collect Rating	What is the difference in the Rating Package API and the Rating LTL Freight API when viewing Negotiated rates?	In order for you to see your negotiated rates for LTL Freight, the postal code must match the payer and the set-up account postal.
Fuel Surcharge	Is the Fuel Surcharge listed as a separate line item in the response for the Rating API for LTL?	Yes. The fuel surcharge is listed as a separate line item within the response.
LTL Shipping	What are the supported LTL Freight countries and territories?	LTL Freight country or territory origins include US, CA & MX. The US territory means the contiguous 48 states of the US and Washington DC. While we service Hawaii, Alaska, Guam, Puerto Rico and the US Virgin Islands, those rates can only be obtained by calling UPS Freight Customer Service at (800) 333-7400.
Maximum Shipment Weight	What is the maximum shipment weight for LTL Freight?	The maximum LTL weight is 19,999 lbs. Anything 20,000 lbs. or over is considered a Truckload (TL) movement. Our public rate engine will not return a rate on shipments weighing equal to or more than 19,999lbs. Instead, the user gets the following message. Rate a Shipment is not available for this shipment. Please call Customer Service for assistance with this rate.
Rating	Is Pallet Rating supported?	Pallet rating is not supported for online rating.
Rating	Does the API rate offshore shipments?	No. Please call Customer Service for offshore rating.
Rates	Are there any rate structures that are not allowable for LTL Freight?	No.
Rates	I have CZAR rates, are they available for use with the LTL Freight Rating or Shipping APIs?	Yes. Czar and Czar Lite rate structures are permitted for use with the Rating or Shipping API for LTL Freight UPS Freight approval required.
Rates	Is 3rd Party or Freight Collect available through the Rating or Shipping APIs?	Yes. The LTL Freight Rating and Shipping APIs are only available for the customer that is paying the invoice. However, the Shipper, Consignee, or the 3rd Party could create a Bill of Lading.
Rates	What rates can be returned using the rating API?	Published rates based on the UPS560 tariff or a contract rate negotiated with UPS Freight.
Rates	Can I choose the rate I want returned in the rate request?	No. The API supports a single rate type based on your setup with UPS Freight. Examples: 1 – You do not have a negotiated rate contract with UPS Freight; Published rates will be returned. 2 – You have a negotiated rate contract with UPS Freight; your negotiated rate will be returned.

Category	Question	Answer
Time in Transit	Is Time in Transit available through the LTL Freight Rating or Shipping APIs?	Yes, Time in Transit (Days in Transit) is available in the Ground Freight Ship and Ground Freight Rate Web Service. The API's return the number of days from the origin to the destination. The days do not take into account Weekends or Holidays.
Maximum Linear Feet	What is the maximum Linear feet allowed for LTL Ground Freight?	The maximum dimensional length of the extreme length articles is 26 feet. The max allowed may change in the future based on Ground Freight business rules. Please contact UPS Freight Customer Service at 800-333-7400 for assistance
GF (LTL) Rating	How can I add locations to a contract? Do I need to work through my UPS Freight Account Manager?	Yes. Please contact our Freight sales representative to ensure accounts and locations are added to the UPS Freight LTL negotiated rates. For more information, visit UPS Freight.
GF (LTL) Rating	Can I use any combination of origin/destination postal codes to receive ABR with Rating - Ground Freight API?	Rating API - Ground Freight does not behave like the Rating API - Package. In order to see negotiated rates for freight, the origin postal code must match the postal code on file with UPS Freight. When the correct origin postal code is not used the response will not include the correct rates.
General	Is phone support provided for the UPS Developer Kit - Developer APIs? If so, what is the number and what are the hours of operation?	Phone support is provided for very basic API questions. Questions that cannot be answered verbally will be directed to the email support form at ups.com. Please go to the Developer Resource Center on ups.com for more information.
General	How do I get technical support for the APIs at ups.com?	Go to ups.com. Under the Help Center, select Technology Support. Under Tools and Resources click on Developer Resource Center. If your questions are not answered on this page, then click on email UPS.

Appendices

Error Codes (WS)

When the UPS system is unable to respond to a request, be it from a malformed request, an illegal or invalid value, or other issues, the API generates an error response. For examples and additional information on error responses, refer to *Chapter 3: Error Responses*, in the *Introduction to the UPS Developer Kit* guide.

- Successful responses may or may not include alerts.
 - Without alerts - Indicates the request has been processed as anticipated.
 - With alerts - Indicates the request has been processed with potentially unanticipated results. The alert contains information in the response that should be passed to the end user.
- The severity of an error may be transient or hard.
 - Transient error - Indicates an error that is temporary in nature. Such errors may be caused by response timeouts due to high server loads or scheduled maintenance in progress. The request may be issued successfully at a later time.
 - Hard error - Indicates the request has a problem that the system is not able to resolve. These errors are critical and prevent requests from processing.

Do not resubmit requests with Hard Errors until the problems causing the error have been resolved.
